14

Definitions on Data

— ISO/IEC 20546:2019 (Big data – Overview and vocabulary)

Dataset

Identifiable collection of data available for access or download in one or more formats

Data

Re-interpretable representation of information in a formalized manner suitable for communication, interpretation, or processing

Note 1 to entry: Data can be processed by humans or by automatic means.

Metadata

Data about data or data elements, possibly including their data descriptions and data about data ownership, access paths, access rights and data volatility

Information

Data that are processed, organised and correlated to produce meaning.

Note 1 to entry: Information concerns facts, concepts, objects, events, ideas, processes, etc.

15

Metadata

"data that provides information about other data"

- **Descriptive metadata** – the descriptive information about a resource.
 - For discovery and identification.
 - Ex: title, abstract, author, keywords.
- **Structural metadata** – containers of data, how compound objects are put together
 - Ex, how pages are ordered to form chapters.
 - Ex: types, versions, relationships, and other characteristics of digital materials.
- **Administrative metadata** – the information to help manage a resource
 - Ex: resource type, permissions, time, when and how it was created.
- **Reference metadata** – contents and quality
 - For quality assessment of the data
 - Ex: conceptual metadata, quality metadata, methodological metadata.
- **Statistical metadata**, also called process data,
 - May describe processes that collect, process, or produce statistical data.
 - Number of rows, columns, etc.
- **Legal metadata** –

https://en.wikipedia.org/wiki/Ex_license, creator, copyright holder

16

Data Interoperability and Semantics

Part 4. The value of data

Part 4.3. Interoperability unlocks the value of data

ICM – Toolbox Engineering and Interoperability of Software Systems – Course unit on Data Interoperability and Semantics
M1 Cyber Physical and Social Systems – Course unit on Data Interoperability and Semantics
Maxime Lefrançois <https://maxime-lefrancois.info>
Course unit URL: <https://ci.mines-st-etienne.fr/cps2/course/data>

Data silos problem illustrated

Marketing

Sales

Purchasing

Repositories of fixed data that are isolated, incompatible, or not integrated

Example of silos <https://factory.dev/pimcore-knowledge-base/whitepaper/data-silos>

19

Data Analytics vs Data Processing

— ISO/IEC20546:2019 (Big data – Overview and vocabulary)

Data Analytics

Composite concept consisting of data acquisition, data collection, data validation, data processing, including data quantification, data visualisation and data interpretation

Data Processing

Systematic performance of operations upon data

Note 1 to entry: Example: Arithmetic or logic operations upon data, merging or sorting of data, or operations on text, such as editing, sorting, merging, storing, retrieving, displaying, or printing.

18

Data integration

*combining **heterogeneous data** and providing users with a unified view of them.*

Simple schematic for a data warehouse.
The Extract, transform, load (ETL) process extracts information from the source databases, transforms it and then loads it into the data warehouse.

Simple schematic for a data-integration solution.
A system designer constructs a mediated schema against which users can run queries. The virtual database interfaces with the source databases via wrapper code if required.

Sub-areas:

- Data warehousing
- Data migration
- Enterprise application/information integration
- Master data management

https://en.wikipedia.org/wiki/Data_integration

20

Interoperability vs Portability

— IEEE Standard Computer Dictionary
— ISO/IEC 19941:2017 (Cloud computing – interoperability and portability)

Interoperability

Ability of two or more systems or components to exchange information and to mutually use the information that has been exchanged

Portability

Ability to easily transfer data from one system to another without being required to re-enter data

21

Interoperability
as an enabler for
the potential
value of data

ex:
Internet of Things

Interoperability at different levels:
from the hardware to policies

- **Policies:** Laws, regulations, norms, ...
- **Behaviour:** Processus, services, operations, ...
- **Semantic:** Knowledge domain vocabularies, taxonomies, ontologies, ...
- **Syntactic:** Encoding, Formats, Schemas, ...
- **Transport:** see also Open Systems Interconnections (OSI) network layers
- **OS:** Kernel, File systems,...
- **Hardware:** Instruction Set Architectures, ...

23

ISO/IEC definitions of interoperability

Transport interoperability

interoperability where information exchange uses an established communication infrastructure between the participating systems

— ISO/IEC 22123-1:2021, Cloud computing — Part 4: Vocabulary

Syntactic interoperability

interoperability such that the formats of the exchanged information can be understood by the participating systems

— ISO/IEC 22123-1:2021, Cloud computing — Part 4: Vocabulary

Semantic data interoperability

interoperability so that the meaning of the data model within the context of a subject area is understood by the participating systems

— ISO/IEC 22123-1:2021, Cloud computing — Part 4: Vocabulary

Behavioural interoperability

interoperability so that the actual result of the exchange achieves the expected outcome

— ISO/IEC 22123-1:2021, Cloud computing — Part 4: Vocabulary

Policy interoperability

interoperability while complying with the legal, organizational, and policy frameworks applicable to the participating systems

— ISO/IEC 22123-1:2021, Cloud computing — Part 4: Vocabulary¹⁴

Data Interoperability – a definition

Data interoperability addresses the ability of systems and services that create, exchange and consume data to have clear, shared expectations for the contents, context and meaning of that data.

— <https://datainteroperability.org/>

Syntactic interoperability

interoperability such that the formats of the exchanged information can be understood by the participating systems

— ISO/IEC 22123-1:2021, Cloud computing — Part 4: Vocabulary

Semantic data interoperability

interoperability so that the meaning of the data model within the context of a subject area is understood by the participating systems

— ISO/IEC 22123-1:2021, Cloud computing — Part 4: Vocabulary

25

Norm-based interoperability

- Hardware and/or software standards
- Standard = Detailed set of technical requirements intended to establish a certain uniformity (in a field of hardware or software development)
- Standard ---- Norm: no clear boundary
 - docx: Microsoft
 - HTML, XML: World Wide Web consortium (W3C)
 - SIM cards: European Telecommunication Standard Institute (ETSI)
 - Postscript became standardized after release
 - De facto standards (not produced by a standard development organization). example: csv, json, rar, pdf, java, flash

26

Data Interoperability and Semantics

Part 4. The value of data

Part 4.4. Sharing data generates economic and societal value

The Data Value chain

28

MARKERS Potential achievements within each process of the value chain mark progress towards data impacts.

The Data Value chain

Open Data Watch. "The data value chain: Moving from production to impact." Data2X.
<https://opendatawatch.com/publications/the-data-value-chain-moving-from-production-to-impact> (2018).

29

The Data Value roadblocks

Open Data Watch. "The data value chain: Moving from production to impact." Data2X.
<https://opendatawatch.com/publications/the-data-value-chain-moving-from-production-to-impact> (2018).

30

Open Data in the US

- Data.gov 2009
- Legal framework:
 - The U.S. Open Government Directive of December 8, 2009, required that all agencies post **at least three high-value data sets online** and register them on Data.gov **within 45 days**
 - OPEN Government Data Act, as part of the Foundations for Evidence Based Policymaking Act (2019)

31

Open Data in France

- France at the forefront of Open Data in Europe:
 - Légifrance 1999
- Legal framework:
 - "The society has the right of requesting account from any public agent of its administration." (Declaration of rights of man and of the citizen of 1789)
 - Law on the liberty of access to administrative documents (1978)
 - European directive 2003 + French Law 2005 + Decree 2011
 - Bill on a Digital Republic (2016)
 - The law on Energy Transition (2015)
- 2014: Chief Data Officer in the French public administration

32

33

Open Data in Europe

The European Data Portal:
Opening up Europe's public data

data.europa.eu/european-data-portal

34

Open Data, Open Content, and Open Knowledge

The Open Definition

The **Open Definition** sets out principles that define "openness" in relation to **data and content**.

It makes **precise** the meaning of "open" in the terms "**open data**" and "**open content**" and thereby ensures **quality** and encourages **compatibility** between different pools of open material.

It can be summed up in the statement that:

"Open means anyone can freely access, use, modify, and share for any purpose (subject, at most, to requirements that preserve provenance and openness)."

Put most succinctly:

"Open data and content can be freely used, modified, and shared by anyone for any purpose"

<http://opendefinition.org/>

35

Open Work

1. Open License or Status

The **work must** be in the **public domain** or provided under an **open license**

2. Access

The **work must** be provided as a whole and at no more than a reasonable one-time reproduction cost, and *should* be downloadable via the Internet without charge.

3. Machine Readability

The **work must** be provided in a form readily processable by a computer and where the individual elements of the work can be easily accessed and modified.

4. Open Format

The **work must** be provided in an open format.

<http://opendefinition.org/>

36

Open data market size

- €184.45 billion open data market size in 2019
- €199.51 - €334.20 billion open data market size forecast for 2025

Open data employment

- 1.09 million open data employees in 2019
- 1.12 - 1.97 million open data employees forecast for 2025

Open data potential per sector

- 15.7% growth expected from high impact and high potential sectors
- High impact:
- High potential:

For details on calculations and assumptions see corresponding sections.

<https://data.europa.eu/sites/default/files/the-economic-impact-of-open-data.pdf> (2020)

Efficiency gains

- Saving lives, e.g. 54 - 202 thousand lives saved by faster emergency response
- Saving time, e.g. 27 million hours saved in public transport
- Saving the environment, e.g. 5.8 Mtoe* saved by reducing household energy consumption
- Improving language services with open data, e.g. by increasing machine translation

Cost savings

- Saving healthcare costs, e.g. €312 - €400 thousand due to faster first aid by bystanders
- Saving labour costs, e.g. €137 - €20 billion by reducing time spent in traffic
- Saving costs on energy bills, e.g. €79.6 billion due to more solar energy production
- Saving public sector costs, e.g. €1.1 billion by lower translation costs

Open data in organisations

- 49% of data used by surveyed organisations is open data and 77% of organisations plan to use more data
- 46% of organisations' revenues are impacted by open data and 73% of organisations expect the impact to increase
- 70% of surveyed organisations create data internally, of which 58% publish some of it as open data

* Million tonnes of oil equivalent
For details on calculations and assumptions see corresponding sections.

https://data.europa.eu/sites/default/files/re-using_open_data.pdf (2020)

39

Data Interoperability and Semantics

Part 4. The value of data

Part 4.5. Machine-actionability of data increases its value

ICM – Toolbox Engineering and Interoperability of Software Systems – Course unit on Data Interoperability and Semantics
M1 Cyber Physical and Social Systems – Course unit on Data Interoperability and Semantics
Maxime Lefrançois <https://maxime-lefrancois.info>
Course unit URL: <https://ci.mines-stetienne.fr/cps2/course/data>

FAIR Principles

The FAIR principles emphasize machine-actionability (i.e., the capacity of computational systems to find, access, interoperate, and reuse data with none or minimal human intervention) because humans increasingly rely on computational support to deal with data as a result of the increase in volume, complexity, and creation speed of data.
